

RPT106

OEM PRESSURE TRANSMITTER

RHOMBERG
INSTRUMENTS

The RPT106 series reliably detects the system pressure in machines, plants and hydraulic power units of industrial and mobile applications

The compact housing ensures flexible integration even where space is limited. The robust units offer high shock, vibration and pressure resistance and ensure wear-free operation over millions of pressure cycles.

These sensors provide excellent measurement dynamics and fast response time to pressure changes.

Features

- Space-saving design for limited space
- Fast reaction due to short response time
- Measuring accuracy $< \pm 0.5\%$, repeatability $< \pm 0.02\%$
- Repeatability $< \pm 0.2\%$ /year
- Industry standard M12 connection for simple wiring
- Compact and robust stainless steel housing
- Reliable detection of system pressure in industrial applications
- High shock and vibration resistance

Specifications

Range	0...1...250MPa
Overload	200%
Stability	$< \pm 0.2\%$ /year
Ambient Temperature	-20 to 120DC
Storage Temperature	-40 to 85DC
Thread	G1/4
Accuracy	0.5%
Output	4-20mA/0..5V/0..10V
Power Supply	8-30VDC
Relative Humidity	$\leq 80\%$
Material (wetted parts)	Stainless Steel
Electrical Connection	M12 x 1 (4 pin)

Product Wiring

Brown: Vcc Pin 1
Blue: GND Pin 3
